

DO I.T. RIGHT

*STEPS YOU SHOULD TAKE TO PRACTICE SAFE COMPUTING
AND TO PROTECT YOURSELF AGAINST HACKERS*

Use STRONG PASSWORDS. Coming up with difficult and hard-to-crack passwords is one of the best ways to protect your personal information. You should choose a password that is at least eight letters long with at least three different kinds of characters. Never share your password with ANYONE.

Download current UPDATES. Microsoft offers automatic security updates. Educate yourself on new Microsoft security problems. Make sure your Windows computer has current updates.

VIRUS protection. McAfee VirusScan is available FREE to all UF students, faculty and staff. Protect your computer from worms, viruses and other malicious attacks.

SPYWARE protection. Some websites automatically copy malicious software to your computer that can allow hackers to take control. Free anti-spyware software is available on the internet.

Use a FIREWALL. Firewalls protect your computer from the outside world. Always make sure you are running a firewall.

Online SAFETY. Practice safe e-mail. Web surf cautiously. Verify the source before providing personal information. Verify files before downloading. Use encryption to protect your transactions.
